Standard Application Procedures for Acceptance of Flame-Resistant Conveyor Belt, 30 CFR, Part 18

1.0 Purpose:

This document provides the Mine Safety and Health Administration's (MSHA) Standard Application Procedure (SAP) for the flame testing, evaluation and acceptance of flame-resistant conveyor belts in accordance with 30 CFR, Part 18.

2.0 Scope:

The Code of Federal Regulations 30 CFR, Part 18, Section 18.6 contains mandatory regulations for flame resistant conveyor belt used in underground mines. This procedure provides the application procedures for applying to the MSHA for acceptance of flame-resistant conveyor belts.

3.0 References:

3.1 Approval and Certification Center (A&CC) Cancellation Policy (APOL 1009).

3.2 Code of Federal Regulations (30CFR), Part 18, Section 18.65.

4.0 Definitions:

4.1 Applicant: One that manufacturers or controls the assembly of a product.

4.2 Preauthorization notice: A statement by the applicant authorizing MSHA to expend a stated amount of money in evaluating / testing the applicant's product prior to the preparation and issuance of the MSHA fee estimate.

5.0 Application Procedure:

5.1 It is recommended that applicants contact the Approval and Certification Center to discuss acceptance and testing requirements prior to submitting an application.

5.2 An application requesting an acceptance of flame-resistant conveyor belt should be sent to the following address:

Title/Subject: Standard Application Procedures for Acceptance of Flame of Flame-Resistant Conveyor Belt, 30 CFR, Part 18		
CDS No.: ASAP5002	Page No. 2 of 14	
Original Issue Date: undated	Follow-Up Review Date: 9/01/07	Revision Date: 8/31/04
Signature/Initial: Steven J. Luzik, Chief, Approval and Certification Center		

Chief
Approval and Certification Center
Mine Safety and Health Administration
RR #1 Box 251, Industrial Park Road
Triadelphia, West Virginia 26059

5.3 Applicants should refer to the application forms in the Appendix that illustrate the type of information required.

- 5.3.1 A 6 numeric digit code number (or less) assigned by the applicant (Application No.).
- 5.3.2 The company name, address, and telephone number of the applicant's representative responsible for answering any questions regarding the application.
- 5.3.3 A complete description of the conveyor belt in addition to any special service application information and any special techniques required of a purchaser by the manufacturer.
- 5.3.4 Provide information on the compounds in the conveyor belt.

The compound ingredients are to be identified and the quantified in accordance with the MSHA Modification and Addendum for submitting Formulations, Effective June 4, 1979. Three options are given; only one is to be used with each application. Be sure to specify whether method a, b, or c, is used.

- a. Specify each ingredient by its chemical name along with its percentage (weight) and tolerance or percentage range. Organic ingredients should be named according to the current rules of the International Union of Pure and Applied Chemistry. Inorganic ingredients should be named according to the Chemical Abstract of the American Chemical Society.
- b. Specify each fire retardant ingredient by its chemical or generic name with its percentage and tolerance or percentage range or its minimum percent. List each flammable ingredient by chemical, generic, or trade name along with the TOTAL percentage of all flammable

Title/Subject: Standard Application Procedures for Acceptance of Flame of Flame-Resistant Conveyor Belt, 30 CFR, Part 18		
CDS No.: ASAP5002	Page No. 3 of 14	
Original Issue Date: undated	Follow-Up Review Date: 9/01/07	Revision Date: 8/31/04
Signature/Initial: Steven J. Luzik, Chief, Approval and Certification Center		

ingredients. List each inert ingredient by chemical, generic, or trade name along with the TOTAL percentage of all inert ingredients. In addition, the product formulation with percentages and tolerances should be kept on file by the applicant; the formulation shall be available to MSHA at the applicant's premises upon request should a product be involved in a mine accident, incident, or quality assurance check.

- c. Specify each fire retardant ingredient by its chemical or generic name with the percentage and tolerance or percentage range or its minimum percent. List all other ingredients. A flame test quality assurance program subject to acceptance by the Approval and Certification Center, Quality Assurance and Materials Testing Division (QA&MTD) should also be provided to maintain the accepted flame resistance level of the product. The flame test program should be maintained and documented as long as the product is made and acceptance is in effect. The flame test records should be available for examination by MSHA personnel. In addition, the product formulation with percentages and tolerances should be available to MSHA at the applicant's premises upon request should a product be involved in a mine accident, incident, or quality assurance check.

5.3.5 The following may be included in the application:

- a. The material contained in this specification is considered to be confidential commercial information and/or trade secrets as covered by federal law (5 USC 552(b) (4)) and is exempt from disclosure requirements of the Freedom and information Action (5 USC 552).
- b. Changes in Composition of Accented Products and Extensions.

MSHA, Approval and Certification Center, Quality Assurance and Materials Testing Division (QA&MTD), may request specific formulation information (name of ingredients) with percentage and tolerances) and/or test data, if an applicant

Title/Subject: Standard Application Procedures for Acceptance of Flame of Flame-Resistant Conveyor Belt, 30 CFR, Part 18		
CDS No.: ASAP5002	Page No. 4 of 14	
Original Issue Date: undated	Follow-Up Review Date: 9/01/07	Revision Date: 8/31/04
Signature/Initial: Steven J. Luzik, Chief, Approval and Certification Center		

is requesting a change in composition of an accepted product or requesting an extension. The request by MSHA will be to determine if the change increases the flammability or toxicity of the product.

5.3.6 Test Samples:

Test samples should be provided as outlined in the Appendix Section entitled: "Specifications for Conveyor Belt Test Samples".

5.3.7 Flammability Testing:

MSHA will test conveyor belt samples submitted. Conveyor belting is defined as "fire-resistant" in accordance with the test specified in Code of Federal Regulations, Title 30, Part 18, Section 18.65. Flammability test data are not required from the applicant.

5.3.8 Toxicity Information:

The applicant should provide information on the toxicity of the finished product including inhalation, ingestion, skin, eye, sensitization, carcinogenic hazards. A toxic product is a finished product or material capable of causing bodily harm to an average individual by chemical action. The toxicity hazard should be under "normal use conditions."

5.3.9 Provide information on the proposed branding of the conveyor belt.

Conveyor belting accepted by MSHA as flame resistant (fire-resistant) shall be marked as follows: Metal stencils furnished by the manufacturer shall be used during the vulcanizing process to produce letters depressed into the conveyor belt with the words "Fire Resistant, USMSHA No. --." This number will be assigned to the manufacturer after the sample has passed the tests. The letters and numbers shall be at least 1/2-inch high. The acceptance markings shall be placed approximately 1 inch from the edge of the carrying (top) cover of the conveyor belt and spaced at intervals not exceeding 30 feet for the entire length of

Title/Subject: Standard Application Procedures for Acceptance of Flame of Flame-Resistant Conveyor Belt, 30 CFR, Part 18		
CDS No.: ASAP5002	Page No. 5 of 14	
Original Issue Date: undated	Follow-Up Review Date: 9/01/07	Revision Date: 8/31/04
Signature/Initial: Steven J. Luzik, Chief, Approval and Certification Center		

the conveyor belt. The markings shall be so placed that they are alternately at opposite edges of the belt. Where cover thickness does not permit markings in accordance with the foregoing, other permanent markings may be accepted. (30 CFR 18.65(f)(1)).

Note: After acceptance in granted, supply a prepaid conveyor belt sample with a 1-inch free border on all sides showing the complete brand.

5.3.10 Quality Assurance Program.

Applications should provide the details with which the applicant intends to maintain compliance with criteria. Although the Approval and Certification Center does not approve quality control plans for conveyor belt actions, acceptance of a conveyor belt by MSHA obligates the manufacturer to maintain the quality of the product to insure the requirements are being met. MSHA does reserve the right to monitor in plant processes, review records, and interview employees with respect to the plan. Any changes affecting flammability or toxicity in the quality assurance program will require re-evaluation by MSHA. The quality assurance program shall include:

- a. Procurement procedures for the components or ingredients of the product.
- b. Manufacturing practices to maintain the formulation.
- c. Procedures for recordkeeping, such as test results, etc.
- d. Product sales literature

Note: If option {c} is used for Formulation submittal, details of a flame test control program must be included as part of a quality assurance program.

If your quality assurance program was previously submitted to MSHA, please make reference as to when or in what previous action it was submitted.

- 5.3.11 The application must be signed by an authorized representative of the company.

5.4 Application Processing:

Title/Subject: Standard Application Procedures for Acceptance of Flame of Flame-Resistant Conveyor Belt, 30 CFR, Part 18		
CDS No.: ASAP5002	Page No. 6 of 14	
Original Issue Date: undated	Follow-Up Review Date: 9/01/07	Revision Date: 8/31/04
Signature/Initial: Steven J. Luzik, Chief, Approval and Certification Center		

5.4.1 Upon receipt of a complete application, an estimate for the cost of processing the application (a CAP letter) will be prepared and sent to the applicant. Or, the applicant may submit a preauthorization notice with their application to eliminate the "CAP" letter. This notice permits immediate evaluation work to begin. Check with MSHA personnel for an estimate of cost.

5.4.2 If an applicant chooses to cancel, fees will be charged for work performed up to the cancellation. If charges are less than the preauthorized amount, the lesser amount will be charged.

5.5 Product Acceptance:

5.5.1 Upon successful testing and evaluation of the submitted product, MSHA will issue an acceptance number.

5.5.2 After acceptance is granted, supply a prepaid conveyor belt sample with a 1-inch free border on all sides showing the complete brand.

5.5.3 The manufacturer may submit a request for an "extension" of acceptance for a product, if minor changes in the product's construction, composition or use is contemplated. MSHA will determine if testing is required for these type modifications.

5.5.4 Companies other than the original manufacturer can market an accepted product under a different trade name or designation (private label). However, to maintain the validity of the acceptance, the original acceptance number issued by MSHA may not be changed. Any other markings on the product are at the discretion of the manufacturer or distributor. Additionally, MSHA must be promptly notified of such actions.

5.5.5 A product may be advertised as accepted by MSHA but such terms as approved, recommended or sanctioned by MSHA must not be used.

5.6 Notification of Discrepancy:

The applicant will be notified of any problems (discrepancies) that require correction with the submitted documents before the acceptance can be

Title/Subject: Standard Application Procedures for Acceptance of Flame of Flame-Resistant Conveyor Belt, 30 CFR, Part 18		
CDS No.: ASAP5002	Page No. 7 of 14

Signature/Initial: Steven J. Luzik, Chief, Approval and Certification Center		

issued. Discrepancies will be resolved in accordance with A&CC's cancellation policy (APOL 1009).

5.7 Right to Rescind:

MSHA reserves the right to rescind any acceptance and require a product's removal from underground mines should it be found to be unsafe, create a health hazard, or otherwise not be in conformance with the acceptance criteria.

6.0 Responsibility:

6.1 The Quality Assurance and Materials Testing Division is responsible for the approval or rejection of applications.

7.0 Distribution:

7.1 Applicants, MSHA Internet Web Master users and A&CC personnel involved in processing such applications.

8.0 Review:

8.1 This document will be reviewed at least once every three years.

9.0 Authority:

9.1 30 CFR, Title 30.

Specifications for Conveyor Belt Test Samples

The following are specifications for conveyor belt test samples to be included with applications for acceptance as MSHA fire-resistant.

A. Application for belts with only one carcass construction must be accompanied by precut samples in accordance with one of the following:

1. Submit four samples with the minimum gauge covers offered, 6"x 1/2" by belt thickness, 2 parallel to the warp; 2 parallel to the weft (fill).

or

2. If the belt is constructed with optional breaker(s), submit four samples which include the breaker and the minimum thickness of covers offered.

MSHA Acceptance: The MSHA acceptance and identifying number will include the sample A.1. or A.2. plus all belts with the same carcass and compounds but with thicker covers.

B. Applications for belts with a line or "family" of related carcass constructions differing only by fabric weight and/or number of plies must be accompanied by eight precut samples, each made with the heaviest of the line of fabrics. (Be sure to identify all other fabrics to be included in the application in addition to those in the samples submitted.) If the belts are offered with a breaker, only samples with a breaker need be supplied. The samples should be as follows:

1. Four samples made with the least number of plies offered and with the minimum thickness of covers offered.
2. Four samples made with the greatest number of plies and the minimum thickness of covers offered.

MSHA Acceptance: The MSHA acceptance and identifying number will include all samples in B. plus all belts made with the same type of fabric and compounds but with heavier covers and with lighter weight fabric than the samples tested.

Lighter weights of the sample type of fabric can be added in the future under the same identifying number as follows:

- I. By simply advising MSHA in writing of any lighter, thinner fabrics to be added and indicating the earlier identification number. Include a copy of previous acceptance letters with the application for extension.
- II. Heavier, thicker fabrics can be added, but eight precut test samples must

be included as specified in B. along with the earlier identification number and acceptance letters.

III. Constructions with a greater or lesser number of plies can be added, but eight precut test samples with the minimum gage covers must be submitted and indicating the earlier identification number and acceptance letters.

C. All belt samples provided for testing must be at the minimum level of flame retardant ingredients (% of total wt.), as specified in the formulation information provided. In cases where a range of flame retardant ingredients are specified, a statement must be provided specifying that, "The samples provided for testing are at the minimum level of flame retardant ingredients."

EXAMPLE OF A TYPICAL APPLICATION

This application is being submitted in accordance with CFR 30, Part 18.

1. Application Number: 790424
2. Product Description: Bitumen King Conveyor Belting, as described in the attached product description sheet 2
3. Ingredients: Method c. is used. Flame retardant ingredient quantities shown as minimum percent of total weight.

Compound 98765:

Styrene Butadiene rubber
Zinc oxide
Stearic acid
SulPoblast accelerator
Sulfur
Petrowax - 6.0%
Antimony oxide - 3.0%
Furnace black
Para-phenylene diamine antioxidant

Compound 98764:

Styrene Butadiene rubber
Zinc oxide
Stearic acid
Sulfoblast accelerator
Sulfur
Petrowax - 6.0%
Antimony oxide - 3.0%
Furnace black
Para-phenylene diamine antioxidant
Phenolic resin

4. Flammability test data (optional):
Flame - 7 sec. (avg.)
Glow - 10 sec. (avg.)

5. Toxicity: This conveyor belting, as a composite product, offers no toxicity potential under conditions of normal usage.
6. Branding: Conveyor belting, as described above, will be branded Bitumen King Conveyor, "Fire Resistant, USMSHA No. 18-CBAYYXXXX-0". Where "A" designates the applicable standard; "YY" designates the year of the standard revision, XXXX designates the four digit approval number, and "0" designates the extension number to be assigned by MSHA following approval of the conveyor belt.
7. Quality Assurance Program: The Polymeric Rubber Company conveyor belt quality control manual was submitted to MSHA with Application No. 890302, dated March 2, 1989. This quality assurance program, still in effect, will be applied in the manufacture of Bitumen King conveyor belting.

Fabric Treatment RFL

Criteria for Testing Conveyor Belts

1. Minimum and maximum number of plies.
2. Specify cover compound.
3. Minimum thickness of top and bottom covers (specify variations).
4. Maximum weight of ply material (specify variations in warp, weft or fill).
5. Specify carcass compound.
6. Specify skim coat.
7. Specify friction coat (test with friction coat if applicable).
8. Specify breaker (test with breaker).
9. Specify floated ply (test with floated ply).
10. Steel cable (specify cable diameters: test with minimum diameter).
11. Test the worst case composition of cover, carcass or skim and friction coat compounds. For test samples provided, specify the actual composition of flame retardant ingredients as a % of final weight.
